

## Window Graphics - Suggested Application Instructions

### Please Note:

Static cling window graphics should be applied to the **inside** of the window.

### Step 1

Before applying the window graphics, always ensure that the window has been thoroughly cleaned. Once the window has been cleaned, thoroughly wet the glass with water from a spray bottle. Applying to wet glass means that you can reposition your graphic more easily to make sure it's in the correct position. Small window graphics can be applied dry, but larger window graphics will apply much easier onto a wet window.

### Step 2

Turn the graphic over and place it down on a clean surface with the cloudy backing material face up. Peel off the entire cloudy backing material and put it to one side. Pick up the window graphic with the "sticky" side facing away from you and hold it near the window in the position that you'd like it to be applied.

### Step 3

Carefully lower the top edge of the window graphic onto the window and press the edge down. You can position the top edge of the graphic by sliding it around on the wet surface until it is in the correct position. Once it's in the correct position, carefully lower the rest of the graphic onto the window and push it into the final position.

### Step 4

Starting at the top-centre and working horizontally, use our recommended squeegee (or a credit card wrapped in a paper towel) to push the trapped water out at the sides.

### Step 5

Once all of the excess water has been removed using the squeegee, the graphic is fully applied. Gently dab the graphic and window with a dry cloth to remove any remaining water.

### Disclaimers

Please satisfy yourself that you are confident of how to apply your graphic on to your chosen surface before attempting application. Colour Frog cannot be held responsible for a poor or failed application. Do not attempt to apply the graphics in very cold or very hot temperatures. If your product comes with gridded application tape the gridlines are not to be used as a horizontal level when applying your graphic. Always look at the graphic itself when ensuring it will be level as the grid squares may not be horizontally aligned with the graphic itself.
